

How to Give Suppositories

1

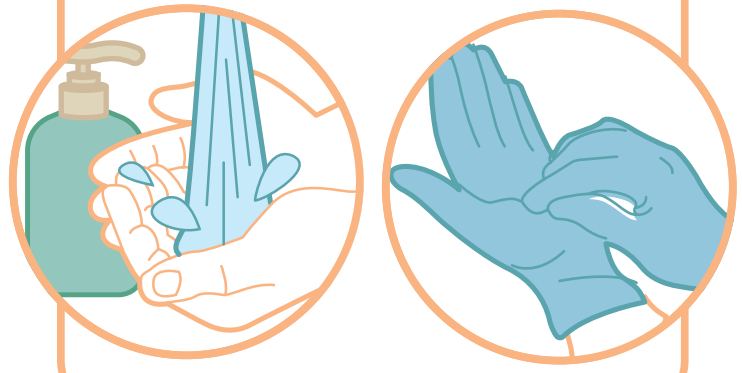

Ensure medication is correct.

Acetaminophen
Suppositories USP, 650 mg

Bisacodyl Suppositories 10mg

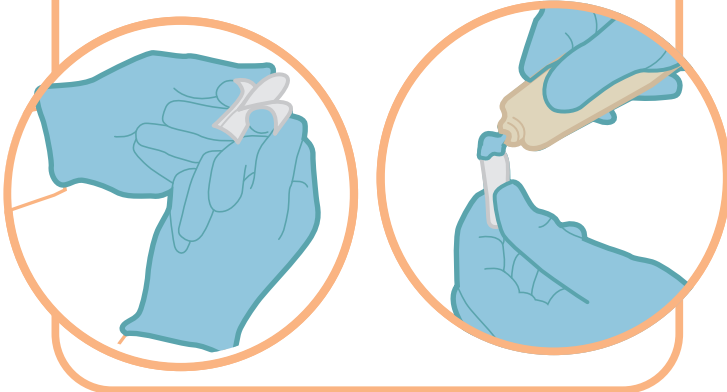

2

Wash your hands and wear a pair of gloves.

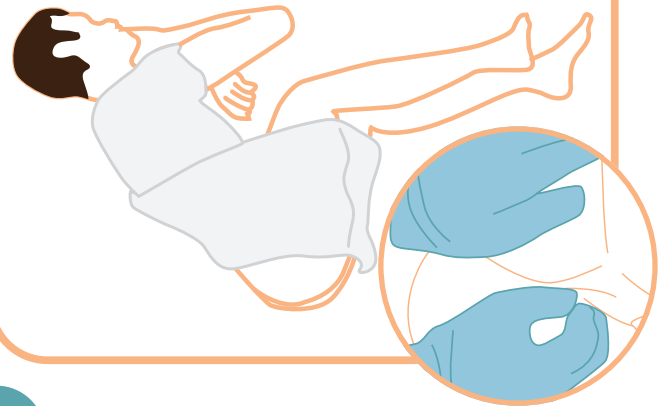

3

Peel open the wrapper.
Apply lubricant over suppository.

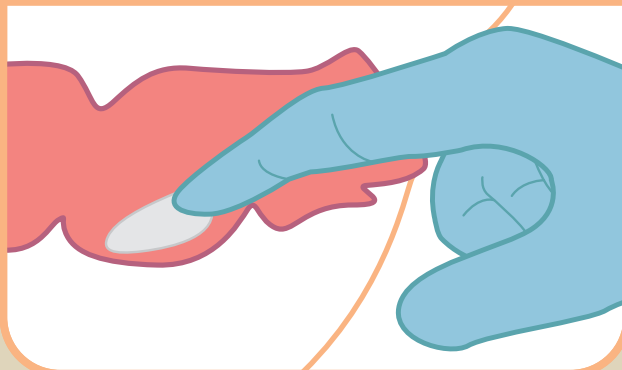

4

Lie your loved one onto his/her side with
knees drawn up towards the abdomen.
Stand behind your loved one, separate the
buttocks to expose the anus.

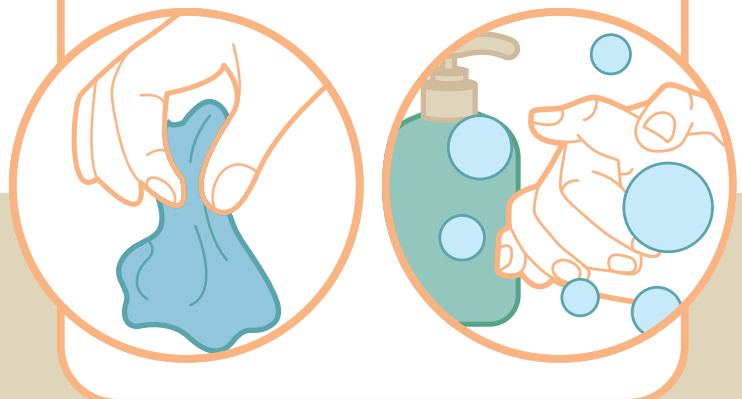

5

Ensure the tapered end of the suppository
is inserted first. Gently insert the whole
suppository into the anus, along the wall of
rectum, as far as your index finger can go.

6

Remove the gloves and wash your hands.
